

SOLUTION BRIEF

DASHBOARD DESIGNER

Configurable dashboards for real-time track-and-trace capabilities for full insight into your operations

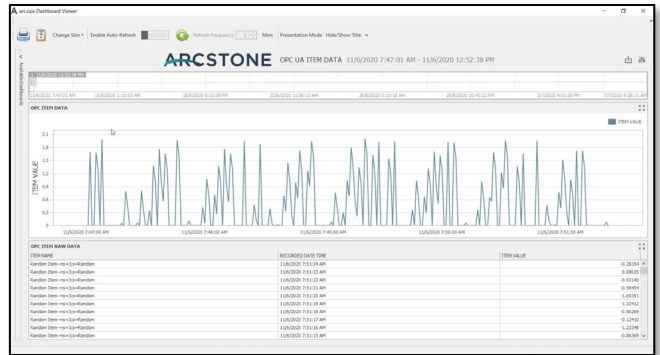

The **arc.ops™** Dashboard Designer Module provides configurable dashboards for management to track important KPIs through a series of charts, graphs and data measures. The module allows users to monitor operations at different locations and sites across the entire production line.

KEY FEATURES

Connectivity and Configuration

The module can connect to multiple types of SQL databases using the Data Source wizard and use data access API to connect to the database and select the required data in code. Design, configure, and monitor calculations for KPIs such as costing, progress, and OEE.

Real-Time Tracking and Analysis

Rapidly aggregate and manage production quality control efforts with statistical calculations and generation key insights. Linked and integrated with Arcstone toolsets and modules to monitor production processes and operations, real-time data is analyzed and presented in dashboards for greater visibility to drive decision-making.

Remote Access and Data Visualization

Users can configure a range of dashboard designs for presentation and use in a variety of settings. Mix and match visual displays and features to design the ideal dashboard for different audiences, from C-suite management to operators on the factory floor.
