

# WORKFLOW BUILDER

Create and configure facility-wide workflows in real time

The arc.ops™ Workflow Builder enables you to rapidly design multiple workflows and recipes through sequential, multiple, or parallel processes. With an intuitive interface, the module allows for the linking of different assets for dynamic workflows and the digitalization of operations.

## Key Capabilities

### Build Dynamic Workflows

Translate complex operations into intuitive workflows consisting of parallel and sequential processes while displaying inventory, personnel and equipment.

### Efficiently Allocate Manpower & Skillsets

Manage all personnel using a skills matrix for scheduling of work in order to efficiently allocate manpower to different tasks based on the skillset requirements and availability of workers on the ground.

### Quality Control & Auditing

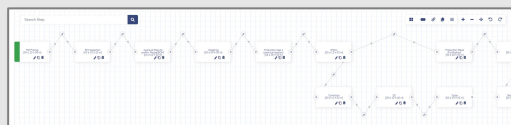

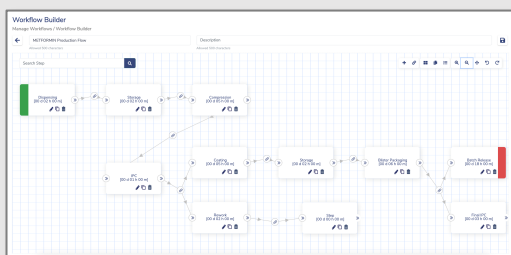

The production line can become paperless with fully digital checklists and recordings that outline all workflow steps. Users can easily reference and update these checklists and recordings accordingly to reflect quality control and auditing requirements.

### Assign Machines & Equipment

Coordinate various equipment requirements and machine specifications for efficient assignment during different workflow processes. This allows users to reduce machine downtime by obtaining a real-time picture of asset utilization.

## Why Arcstone?

Arcstone is at the forefront of helping manufacturers gain better visibility and optimization of their production processes through digitization. We are committed to continuously improving our Workflow Builder solutions to give customers the ability to monitor production progress in real time and effectively optimize resource orchestration.
